

U.S. Army Recruiting Command

Subject: Application for Automated Logistical Specialist (92A) Position

I am writing to ask if U.S. Army Recruiting Command has any work experience opportunities available during the summer. I am a second-year Bachelor of Information Technology (BIT) student and have achieved strong academic results. Please find my CV attached for your reference.

Through my studies and projects, I have gained skills in software development, database management, and system optimization, which are useful in logistics and inventory management systems. As an IoT Coordinator for the Underground Water Leakage Solution project, I designed a realistic working simulation. As a Python and Java developer, I have developed stock management and transaction features with a user-friendly interface.

I am very interested in working in automated logistics and management systems, as I enjoy problem-solving and organizing data efficiently. The Automated Logistical Specialist (92A) role in the U.S. Army aligns with my skills. I have read about the Army's efforts to improve inventory management and technology use, and I would love to contribute to this field.

I would appreciate the opportunity to discuss any suitable roles. I will follow up at any given time and arrange a time to talk. I am available to start work and can provide any additional details if needed.

Looking forward to the response.

Sincerely,

Rhythm Gurung
